

Standalone programmable detector designed to detect toxic gases and O₂ with electrochemical technology CO₂ and A1 safety grade refrigerants with infrared technology with infrared technology and early detection of H₂ in battery rooms.

Provided with a 16 X 2 lines backlit display, three keys, programmable alarm relay output, and internal acoustic.

Special functions for toxic gases:

- Digital control over the sensor status.
- Automatic testing of hardware status.
- Digital filter based on variable sampling of the sensor's average values.
- Automatic temperature compensation providing a correct response to temperature variations.
- Exact automatic zero adjustment. Monitors zero in relation to the electronics and sensor response. STANDGAS automatically runs a test every 30 minutes: if drift is higher or lower than 2% of the scale's total value, it will be readjusted to zero; otherwise, the datum will be displayed as a reading.
- Infrared sensors with microprocessor control for temperature compensation, linearisation, and memorisation of calibration parameters.
- Easy replacement in the installation without recalibration or use of gas.

Also available in a version with RS485 communication compatible with **DURGAS** control panels (as of software V04)

Especially indicated for use in laboratories or compartmentalised zones that in addition to local use require remote control, handling and reporting of their status.

Up to 8 units can be connected per zone while maintaining their compatibility with all other gases. (RS485 version)

- **Standalone functioning:** without connection to any control centre
- **Backlit 16 X 2 line display**
- **Mixed functioning:** Local information and actuation and RS485 communication to a control centre.
- **Protection grade IP65.**
- **Universal support with inclination for ceiling and floor - optional**
- **Power charger at 230V with capacity to connect 1 to 10 STANDGAS detector units - optional**

**Protect all possible sources of leaks, connections, elbows, gas inlets/outlets, valves, welds, compressors, etc...

All gases of the A1 safety groups are heavier than air, take the above into account

The coverage data is a guideline, as it can vary depending on the environment.
